Application instructions

Twist
- Hold bottle in an upright position
- With the other hand, grasp the applicator neck, making sure not to touch the sponge
- Twist the applicator neck in the direction of the arrow until it stops
- To activate, firmly push the applicator head down into the bottle until a snap is heard

Apply
- Invert bottle, and gently squeeze to dispense solution
- Once applicator sponge has been primed with solution, do not continue to squeeze the bottle
- Apply thin, even coat to operative site; do not blot
- If applying prep to a tight area (e.g., neck, skin folds), insert prep towels underneath to absorb excess solution
- Remove any excess prep with absorbent towels or gauze

Let Dry
- Wait until prep is dry (minimum of 3 minutes on skin; up to 1 hour on hair) before draping or using ignition sources (e.g., cautery, laser)
- Discard prepping materials, including solution-soaked materials
- If early removal is necessary, remove with high pH-level soap and water

About Prevail-FX Solution:
- Broad-spectrum antimicrobial activity
- Proprietary flow control applicator
- Generous 40mL volume
- Fluid-resistant, film-forming solution
- No special remover lotion required; if early removal is necessary, remove with any high pH-level soap and water
- For use when ChloraPrep® skin antiseptic is not indicated

Safety points for products containing alcohol:
- Alcohol is a fire hazard
- Do not drape or use ignition source until solution is completely dry
  - Minimum of 3 minutes on hairless skin
  - Hairy areas may take up to 1 hour to dry
- At the end of prep, discard any portion of the solution which is not required to cover the prep area. It may not be necessary to use the entire amount available.
- Do not allow solution to pool
- Remove wet materials from prep area

Additional information:
- Discard the applicator after a single use
- Non-toxic, latex-free
- For external use only
- Do not use on children less than 2 months of age
- Do not use on open wounds or as a general skin cleanser
- Do not use in the eyes or for prepping mucous membranes
- Do not use on iodine-sensitive patients
- Use in well-ventilated area
- Store between 20-25°C (66-77°F)
- Avoid excessive heat above 40°C (104°F)
- Store within recommended conditions to maintain appearance of tint and efficacy

Before using Prevail-FX solution, please read the instructions on the package. Use in accordance with the policies and procedures of your hospital.
