Create more efficient perioperative and specialty procedure areas

Pyxis™ perioperative solutions

From streamlining supply chain and case management to facilitating regulatory compliance, Pyxis perioperative solutions help hospitals improve clinician workflow, financial performance and patient care.

Unlike other departments that measure expenditure based on length of stay, your performance is often driven by time and cost per case. With the ability to chart, charge and reorder supplies with the touch of a button, you help ensure item usage is accurately documented, sent directly to the billing system and reordered promptly to avoid stockouts. And with integration between Pyxis supply technologies and your operating room information system (ORIS), you can transmit surgical supply information directly into the patient record—enabling nurses to spend less time on documentation while improving case management for bottom-line results.

Pyxis perioperative solutions can help your healthcare facility:

- Improve workflow and revenue cycle management with ORIS integration

- Manage and standardize your pick list, preference items and trunk stock

- Increase charge capture and case costing accuracy

- Facilitate compliance for managing medications, tissues and implants

- Utilize procedural reporting to enhance supply performance visibility by procedure, physician or other key performance indicators

- Gain insight and analytics with the Knowledge Portal for Pyxis technologies

BD

Pyxis ProcedureStation™ system

This system helps reduce time-consuming and costly inefficiencies by automatically integrating surgical supply information directly with the perioperative record using the Pyxis ProcedureStation system with ORIS integration.

Pyxis ProcedureStation system

Secure inventory management featuring touch-to-take technology and ORIS integration capabilities
52" W x 28" D x 79.5" H

A flexible platform you can build on and leverage

Pyxis perioperative solutions help clinicians save time while providing hospitals a continuous return on investment. Whether for the operating room, cath lab or specialty areas, Pyxis perioperative solutions can help facilities increase product standardization, capture patient charges by procedure and improve case and revenue cycle management.

Pyxis Anesthesia system

Secure medication and inventory management
47.5" W x 28" D x 61" H

Pyxis CathRack

Secure cath lab inventory management
52" W x 28" D x 79.5" H

Pyxis ProcedureStation single-column system

Secure inventory management
31" W x 28" D x 79.5" H

Hybrid solutions

Secure and open access technologies

Pyxis ProcedureStation system

Tissue and implant management

Pyxis ProcedureRoller™ system

Secure mobile inventory management
35.5" W x 28" D x 56" H

Open-access solutions Pyxis ProcedureStock™ system

Barcode inventory management

Pyxis JITrBUD system

Wireless inventory management
