Clear, clean comfort you can see

BD ChloraShield™ IV dressing with CHG antimicrobial

The innovative BD ChloraShield IV dressing with CHG antimicrobial is designed to uniquely address some of the limitations of standard IV catheter dressings including loss of adhesive integrity due to the presence of moisture and exudate.¹

- Proprietary BeneHold™ CHG adhesive technology helps protect and preserve the IV catheter site.²
- It also provides the dressing with sustained antimicrobial activity against skin flora for up to seven days.³
- Optimized moisture management wicks away moisture and exudate.⁴
- Absorbed fluid is released through the film by vapor exchange.
- The dressing acts as a waterproof and bacterial barrier that protects skin from outside contaminants.
- Transparent material enables visual inspection.
- Moisture-management helps keep the dressing transparent for ongoing inspection.
- A built-in date strip allows for convenient site documentation.
- Thin, flexible material is easy to apply and remove.
- The IV Surround version has additional securement features, including a nonwoven border and a slit to securely surround the catheter.

¹ The dressing can manage between 2 and 11 mL of fluid in a 24-hour period depending on size.
Experience visibly improved care

BD ChloraShield IV dressing with CHG antimicrobial

BD ChloraShield IV dressings come in a variety of sizes and configurations that support a wide range of IV applications.
