ChloraPrep® 1 mL applicator

Patient preoperative skin preparation
2% chlorhexidine gluconate (CHG) and 70% isopropyl alcohol (IPA)
The ChloraPrep® 1 mL applicator from CareFusion provides clinicians with the unique applicator design and formulation they know and trust in a new 1 mL size. With its unique delivery system, the 1 mL applicator is easy to use and can help promote aseptic techniques and best practices.

ChloraPrep skin preparation is a one-step, broad-spectrum antiseptic that significantly reduces microorganisms on the skin that can cause infection. Studied in more than 20 peer-reviewed publications, the 2% chlorhexidine gluconate (CHG) and 70% isopropyl alcohol (IPA) formulation acts fast and shows persistent antimicrobial activity for at least 48 hours.
The ChloraPrep 1 mL applicator advantage

ChloraPrep skin preparation products offer:

- Effectiveness against a broad spectrum of microorganisms.¹
- Rapid and persistent defense against antimicrobial activity.
- Low incidence of irritation.¹
- No or minimal systemic absorption.
- Maintained effectiveness in the presence of blood, unlike iodine-based products.¹
- Easy clinician activation with 1 mL size applicator.

ChloraPrep skin preparation products have a well-documented history in clinical practice. The 2% CHG/70% IPA formulation has been studied in more than 20 peer-reviewed publications.
Instructions for use

Before using the ChloraPrep 1 mL applicator, read the instructions on the package. Use in accordance with your hospital’s policies and procedures.

PINCH

- Hold the applicator with the sponge down. Do not touch the sponge.
- Pinch the wings only once to activate the ampoule and release the antiseptic.

APPLY

- Allow the solution to partially load in the sponge. Gently press the applicator against the treatment area to evenly distribute the solution throughout the sponge.
- Once the solution is visible on the skin, completely wet the treatment area with antiseptic, using gentle back-and-forth strokes, progressing from the incision site to the periphery of the surgical field:
  - For dry sites (e.g., abdomen or arm), use gentle, repeated back-and-forth strokes for 30 seconds.
  - For moist sites (e.g., inguinal fold or axilla), use gentle, repeated back-and-forth strokes for two minutes.

DRY

- For dry surgical sites, allow the area to dry for approximately 30 seconds.
- For moist surgical sites, allow the area to dry for approximately one minute. Do not blot or wipe away the solution.
- The solution must be dry for optimal drape/dressing adhesion.
Safety points for products containing alcohol

- Do not use with electrocautery.
- Do not allow the solution to pool.
- Remove wet materials from the preparation area.
