CareFusion Surgical Clippers general purpose blade

Provides a versatile choice for preoperative hair removal

The general purpose blade provides an effective solution for most procedural hair removal. As part of the CareFusion Surgical Clippers system, the general purpose blade quickly removes all types of body hair with a cut that’s similar to a razor, while leaving the skin intact. You and your patients will feel the difference.

The general purpose blade offers the following features:

- Wide blade for efficient cutting
- Clipping closer to the skin without disrupting it
  - .23 mm with the 4406 general purpose blade compared to .6 mm with the 3M 9660 blade
- Existing clipper handle
- Disposable blade
- Wet/Dry capability
- Drop-in charging so clippers are always ready
1. Attach the blade
With gloves on position a new blade on the top of the clipper head. Align the mark on the clipper blade to the arrow. Slide the blade toward the dot to secure it in place until you hear a click.

2. Remove the blade
Turn the clipper off, position the clipper blade facing downward over a sharps trash receptacle and use your thumb to push the blade forward along the blade frame.

Tips for clipping with the general purpose blade:
• Hold the clippers like a pen or pencil with the CareFusion logo facing up
• Rest the base of the blade flat on the surface of the skin
• Clip against the grain of the hair
• Clip only where necessary
