We are proud to introduce a new line of reusable micro-laparoscopic instruments. These durable instruments fit through a 2.9 mm inner-diameter trocar system, helping assure a virtually scarless surgery. The instruments can be used to support complete micro-laparoscopic procedures or provide additional noninvasive retraction.

**ADOS system adds strength and stability**

Our MicroLap instruments feature a special over-sleeve trocar system called Access Device of Strength (ADOS). The instruments and scopes with an icon or catalog number ending with “ADOS” are compatible with the ADOS system. The ADOS system adds strength and stability to the 2.7 mm instruments and 3 mm scopes, which enable them to function similarly to standard 5 mm products. These instruments connect to the ADOS trocar over-sleeve and retain their full functionality and range of motion, but with added strength and stability.

The ADOS system is available with each type of our MicroLap hand instruments, including graspers, dissectors, needleholders and scissors, as well as our MicroLap scopes and electrodes.
Instrumentation

Handles

Our MicroLap hand instrumentation is available in four hand styles:

Trocars

The CareFusion MicroLap trocar line includes fully reusable 3.0 mm and 3.5 mm trocars to support your micro-laparoscopic procedural needs.

To order a complete trocar, purchase a trocar sleeve and any of the indicated compatible obturators. You can also order the individual components and replacement parts shown on each page.

It is recommended that you have extra valves and sealing caps on hand at all times. These are critical components to the functionality of the trocar, and keeping a selection on hand will help reduce any downtime due to missing parts.
