TIPS FOR SUCCESS

SHARP INSERTION:
> Keep the stabilization platform and finger grips pushed together.
> DO NOT insert holding only onto the stabilization platform as this will push the needle back into the catheter.
> Avoid holding in a manner that pushes forward against the stabilization platform.

EASY VESSEL ACCESS:
> Look for initial blood return along the catheter near the insertion site.
> Lower and slightly advance the entire system to ensure the catheter tip is within the vessel.
> Look for continuous blood flow along the extension tubing to confirm you are still in the vessel.

SMOOTH CATHETER ADVANCEMENT:
> Push the catheter forward off the needle rather than pulling the needle back.
> Use the pad of your index finger, not your fingernail, behind the push tab.
> Push down and forward against the push tab.

SIMPLE NEEDLE REMOVAL:
> Pushing down gently on the stabilization platform, pull back on the finger grips until the needle shield releases.
> Do not touch the push tab during needle removal.

BLOOD CONTAINMENT:
> Secure the vent plug before insertion.
> Clamp the extension tubing before replacing the vent plug with a needleless connector.

Consult product insert for complete instructions, warnings, and cautions.
