Examples of misaligned secondary labels

- Positive patient ID
- Bar code scannable
- Full-size patient labels
- Operational efficiencies

- Easy to see fill volumes
- Tube type ID if closure is removed

Examples of misaligned secondary labels

#1 National Patient Safety Goal: “Improve the Accuracy of Patient Identifiers”
– The Joint Commission

Steps to properly align secondary labels

Step 1
Using the colored sidebar as your guide, position the V-Notch™ secondary label on the tube, leaving the colored sidebar exposed.

Step 2
Smoothly wrap the V-Notch™ secondary label around the tube, leaving a clear window to view the sample.
