1. Peel back protective sticker to expose rubber-covered cannula.

2. Push C&S Preservative Tube (gray top) into the integrated transfer port.
   • Hold in position until flow stops.
   • Remove tube.
   • Shake tube vigorously.

3. Push UA Preservative Tube (cherry red/yellow top) or plain UA Tube into integrated transfer port.
   • Hold in position until flow stops.
   • Remove tube.
   • Invert UA Preservative Tube 8-10 times to mix the sample.

4. Place protective sticker back over the integrated transfer port.
   • Label both filled tubes with patient’s name, the date/time of specimen collection and any other data required by your institution.

5. Remove lid from cup and dispose in a sharps collector.
   • Dispose of urine according to your facility’s policy.
   • Dispose of collection cup as a biohazard.

Handle all biologic samples and medical “sharps” (lancets, needles and transfer straws) according to the policies and procedures of your facility. Obtain appropriate medical attention in the event of any exposure to biologic samples (for example, through a puncture injury) since they may transmit viral hepatitis, HIV (AIDS), or other infectious diseases. BD does not recommend reshielding used needles, but the policies and procedures of your facility may differ and must always be followed. Discard any medical “sharps” in biohazard containers approved for their disposal.
