BD BBL™ Crystal™ Autoreader
- Consistent and reproducible results without subjective interpretation
- Reagent-free BBL Crystal ID Systems provide identification of over 500 bacteria with automated interpretation

BD PHOENIX™ Automated Microbiology System
- Capacity to simultaneously perform from 1 to 100 ID/AST determinations.
- Random entry on-demand loading
- Single or batch inoculation
- The ability to test identification or susceptibility alone or in combination

This list has been prepared as an aid to those laboratory workers who find it difficult to associate the generic and trade names of the ever increasing number of antibiotics and other antimicrobial agents which have been developed.

Items which appear in bold type in columns headed "**BBL**™ Discs Catalog Number" and "Code" are designated for use in the Standardized Susceptibility DiscPlate Method (BauerKirby). Generic names are shown in italicized type; trade names are given in conventional print. Names in the first column are arranged alphabetically with synonyms for identical compounds in the next adjacent column, followed by the name of the manufacturer of that antibiotic or antimicrobial substance.

The **BBL**™ Catalog Number and **SensiDisc**™ Code for _in vitro_ bacterial susceptibility testing are given. It should be recognized that in the development of antimicrobial agents and antimicrobial therapy, newer compounds, salts and radicals have evolved from the earlier substances; some of these achieve greater potency and maintain higher or longer lasting blood levels than the original materials from which they were synthesized; however, the bacterial spectrum is not essentially different. For this reason, it should be understood that this chart is for laboratory use only and is not intended and should not be used as a guide to therapy.

Information about therapeutic use may be obtained from the manufacturers of the various compounds.

Catalog numbers refer to **SensiDisc** agents in packages of single cartridges and cartons of 10 cartridges for use in **SensiDisc** disc dispensers.
