

# BD Assurity Linc™

## Remote Service

Maximize your System Uptime with automatic instrument data collection and download

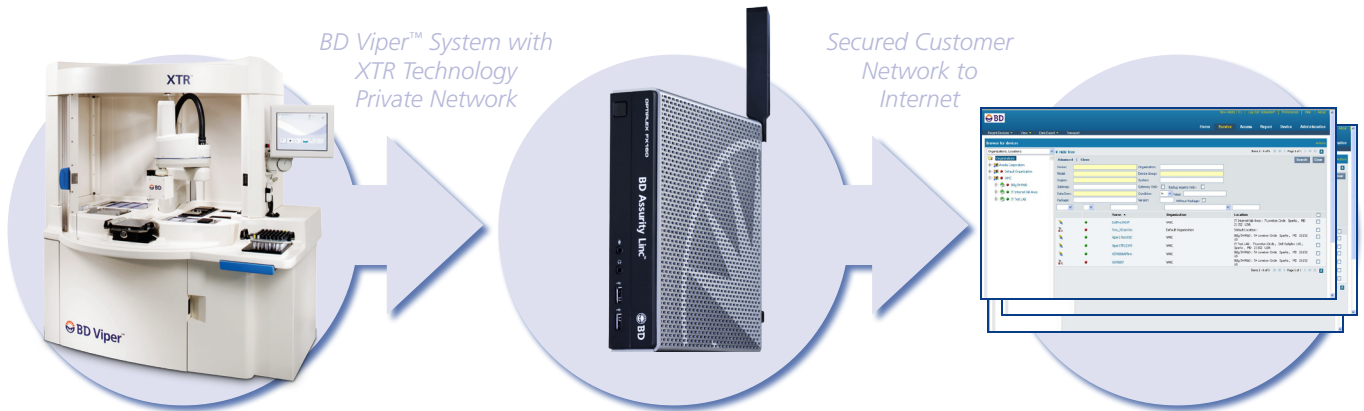

Helping all people  
live healthy lives

More time to do what is important to you.

- **Automatic Data Collection and Transfer**  
With secured and encrypted connection, no more manual data downloads and transfer.
- **Efficient Staff Utilization**  
Diagnose problems without impacting lab staff for additional troubleshooting information
- **Maximize Uptime**  
Less time to issue resolution, delivers more uptime

**BD Assurity Linc™ provides BD service with a secure data link decreasing hands-on troubleshooting**

# How does BD Assurity Linc™ work?

## BD Viper™ System with XTR Technology

The BD Assurity Linc™ monitors your instrument using a secure connection between the BD Assurity Linc Remote Service software and the BD Service and Support Center.

## BD Assurity Linc™

The BD Assurity Linc™ application communicates with the BD Service and Support Center via your private network over the internet using encryption algorithm to provide high level of data security.

## BD Service and Support Center

BD Assurity Linc™ provides critical trouble shooting data allowing the BD Service and Support Center to identify and resolve issues quickly.

# Complete Peace of Mind

### • Superior customer service at your fingertips

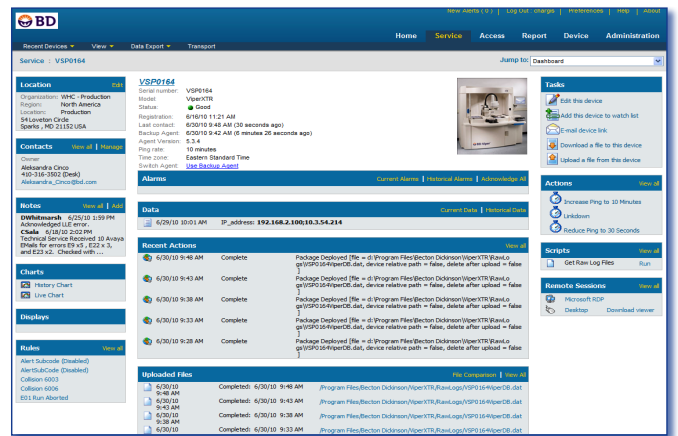

The Assurity Linc system will monitor key parameters of the BD Viper XTR™ System and automatically send alerts of instrument errors to the BD Service and Support Center.

### • Enhanced service response and issue resolution time

BD Assurity Linc™ is backed by an extensive service and support organization of professionals, who have a single goal: 100% customer satisfaction.

### • Maximizes your system uptime

Faster issue identification and resolution via the direct connectivity of BD Viper™ XTR to the BD Service and Support Center.

## Technical Specifications and Requirements

- Network connection with internet access (Ethernet/ RJ45 port)
