# Trichophyton Agars 1 – 7

#### **Intended Use**

Trichophyton Agars are differential media used in the presumptive identification of *Trichophyton* species based on nutritional requirements.

# **Summary and Explanation**

Members of the genus *Trichophyton* have specific nutritional requirements that are essential for definitive identification. <sup>1-3</sup> Georg and Camp devised a set of chemically-defined media for differentiation and identification of *Trichophyton* isolates based on specific vitamin and amino acid requirements. <sup>4</sup> These requirements are determined by comparing growth in a basal medium (Trichophyton Agar 1 or 6) with the amount of growth obtained by providing a specific nutrient. Trichophyton Agar 2, 3 and 4 are used with medium 1 to determine whether an

isolate requires inositol, thiamine or both. Trichophyton Agar 5, equivalent to Trichophyton Agar 1 with added nicotinic acid (2 mg/L), is used with medium 1 to determine the requirement for nicotinic acid, and medium 7 is used with medium 6 to determine the requirement for histidine.

# **Principles of the Procedure**

Nutritional requirements are determined by inoculating a control medium and a medium enriched with a specific vitamin or amino acid with *Trichophyton* isolates that have been presumptively identified by gross colony characteristics and microscopic morphology. <sup>1-6</sup> Moderate to heavy growth in the vitamin- or amino acid-enriched medium compared to little or no growth in the basal medium indicates that the isolate requires that nutrient.

# **User Quality Control**

#### **Identity Specifications**

## Difco™ Trichophyton Agars 1, 2, 3, 4, 6 or 7

Dehydrated Appearance: White to off-white, free-flowing, homogeneous.

Solution: 5.9% solution, soluble in purified water upon boiling. Solution is

light to medium amber, slightly opalescent.

Prepared Appearance: Light to medium amber, slightly opalescent.

Reaction of 5.9%

Solution at 25°C: pH  $6.8 \pm 0.2$ 

### Cultural Response

## Difco™ Trichophyton Agars 1, 2 or 3

Prepare the medium per label directions. Inoculate with fresh cultures and incubate at  $30 \pm 2$  °C for up to 2 weeks.

ORGANISM	ATCC™	RECOVERY AGARS 1 & 2	RECOVERY AGAR 3
Trichophyton concentricum	9358	Good	Good
Trichophyton schoenleinii	4822	Good	Good
Trichophyton verrucosum	34470	None to poor	Good

## Difco™ Trichophyton Agar 4

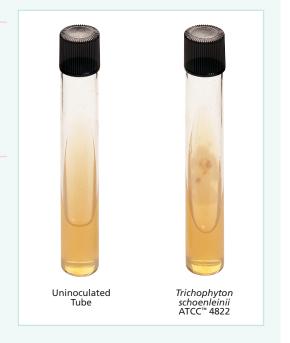

Prepare the medium per label directions. Inoculate with fresh cultures and incubate at  $30 \pm 2$  °C for up to 2 weeks.

ORGANISM	ATCC™	RECOVERY
Trichophyton rubrum	28188	Good
Trichophyton verrucosum	34470	Poor
Trichophyton violaceum	8376	Good

## Difco™ Trichophyton Agars 6 or 7

Prepare Trichophyton Agar 6 per label directions, plain and with 0.03 g/L L-Histidine HCl. Prepare Trichophyton Agar 7 per label directions. Inoculate with fresh cultures and incubate at 30  $\pm$  2°C for up to 2 weeks.

ORGANISM	ATCC™	RECOVERY AGAR 6 PLAIN	RECOVERY AGAR 6 WITH L-HISTIDINE HCL	RECOVERY AGAR 7
Microsporum gallinae	22243	Good	Good	Good
Trichophyton megninii	12106	Poor	Good	Good

#### **Formulae**

Difco™ Trichtophyton Agar 1	
Approximate Formula* Per Liter Vitamin Assay Casamino Acids	9 9 9
Difco™ Trichtophyton Agar 2	
Approximate Formula* Per Liter         Vitamin Assay Casamino Acids       2.5         Dextrose       40.0         Monopotassium Phosphate       1.8         Magnesium Sulfate       0.1         Agar       15.0         Inositol       50.0	g g g g g mg
Difco™ Trichtophyton Agar 3	
Approximate Formula* Per Liter         Vitamin Assay Casamino Acids       2.5         Dextrose       40.0         Monopotassium Phosphate       1.8         Magnesium Sulfate       0.1         Agar       15.0         Inositol       50.0         Thiamine HCl       200.0	9 9 9 9 mg µg
Difco™ Trichtophyton Agar 4	
Approximate Formula* Per Liter         Vitamin Assay Casamino Acids       2.5         Dextrose       40.0         Monopotassium Phosphate       1.8         Magnesium Sulfate       0.1         Agar       15.0         Thiamine HCl       200.0	д д д д
Difco™ Trichtophyton Agar 6	
Approximate Formula* Per Liter Ammonium Nitrate	g g g
Difco™ Trichtophyton Agar 7	3
Approximate Formula* Per Liter Ammonium Nitrate	9 mg g g g

# **Directions for Preparation from Dehydrated Product**

### Difco™ Trichophyton Agars 1, 2, 3, 4, 6 and 7

- 1. Suspend 59 g of the powder in 1 L of purified water. Mix thoroughly.
- 2. Heat with frequent agitation and boil for 1 minute to completely dissolve the powder.
- 3. Autoclave at 121°C for 12 minutes.
- 4. Test samples of the finished product for performance using stable, typical control cultures.

#### **Procedure**

Using a sterile inoculating loop or needle, remove a small amount of colony growth from the isolation medium and streak the agar surface. A small inoculum should be used to prevent carry-over of essential nutrients from the isolation medium.

Incubate medium at room temperature for up to 2 weeks.

## **Expected Results**

Record the amount of growth using + to indicate a trace of submerged growth to 4+ to indicate maximum growth. Consult appropriate texts for information needed for interpretation of the results.1,2

## **Limitations of the Procedure**

- 1. It is important that pure cultures from a medium that is not vitamin enriched, such as Sabouraud Dextrose Agar or another general-purpose fungal medium, be used for the inoculum.
- 2. If cultures are contaminated with bacteria, the cultures should be grown on a fungal medium containing antibiotics for several generations to eliminate the bacteria. Many bacteria synthesize vitamins and may invalidate the test results.
- 3. When inoculating Trichophyton Agars, take care not to carry-over growth substances from primary cultures to the tube media used in the differential tests. Inocula transferred to the nutrition tubes should be very small.
