### **TAT Broth Base • TAT Broth**

#### **Intended Use**

TAT Broth Base with added polysorbate 20 and TAT Broth (complete) are used for cultivating microorganisms from highly viscous or gelatinous materials.

#### **Summary and Explanation**

TAT (Tryptone-Azolectin-Tween™\*) Broth Base with the addition of polysorbate 20 is recommended for testing for the presence of microorganisms in viscous materials, such as salves or ointments. It is especially adapted to the testing of cosmetics. Cosmetics and pharmaceutical products are subject to contamination during manufacturing and use by consumers.¹ Preservatives are used in aqueous products to make them self-sterilizing for vegetative bacteria, yeasts and molds, and bacteriostatic or bactericidal for spores.¹ TAT Broth is the medium, including polysorbate 20, provided in bottles.

#### **User Quality Control**

## *Identity Specifications*Difco™ TAT Broth Base

Dehydrated Appearance:

Beige, free-flowing, homogeneous.

Solution:

2.5% solution with 4% polysorbate 20. Soluble when heated to 50-60°C; let stand for 15-30 minutes with occasional agitation to dissolve prior to autoclaving. Solution is light amber, clear to very slightly opalescent, may have a very

slight precipitate.

Prepared Appearance:

Light amber, clear to very slightly opalescent, with a very sight precipitate.

Reaction of 2.5% Solution

w/4% Polysorbate 20 at 25°C: pH 7.2  $\pm$  0.2

## Cultural Response Difco™ TAT Broth

Prepare the medium per label directions or use prepared TAT Broth. Inoculate and incubate at  $35 \pm 2^{\circ}$ C for 18-48 hours.

ORGANISM	ATCC™	INOCULUM CFU	RECOVERY
Bacillus subtilis	6633	$10^2 - 3 \times 10^2$	Good
Candida albicans	26790	$10^2 - 3 \times 10^2$	Fair to good
Pseudomonas aeruginosa	27853	$10^2 - 3 \times 10^2$	Good
Salmonella enterica subsp. enterica serotype Typhi	6539	10 <sup>2</sup> -3×10 <sup>2</sup>	Good
Staphylococcus aureus	25923	$10^2 - 3 \times 10^2$	Good

#### **Principles of the Procedure**

Peptone provides the nitrogen, vitamins, amino acids and carbon in TAT Broth Base. Soy lecithin and polysorbate 20 neutralize preservatives in the cosmetics or pharmaceutical products, allowing bacteria to grow.

#### **Formulae**

#### Difco™ TAT Broth Base

<sup>\*</sup>Adjusted and/or supplemented as required to meet performance criteria.

# **Directions for Preparation from Dehydrated Product**

- 1. Suspend 25 g of the powder in 960 mL of purified water.
- 2. Add 40 mL of polysorbate 20.
- 3. Heat in a water bath at 50-60°C for 15-30 minutes with occasional agitation to dissolve completely.
- 4. Autoclave at 121°C for 15 minutes.
- 5. Test samples of the finished product for performance using stable, typical control cultures.

#### **Procedure**

- 1. Add 10 g or 10 mL of an undiluted sample to 90 mL of complete medium and agitate to obtain an even suspension.
- 2. Incubate at  $35 \pm 2$ °C for 18-48 hours.

#### **Expected Results**

Tubes or bottles exhibiting growth should be subcultured for identification.
