Instructions for opening the ampoule

Opening the ampoule subjects the contents to the environment. Prior to opening, the user must determine the level of environmental controls necessary for their purposes (for example, using sterile gloves under a laminar flow hood.)

The ampoule has been pre-scored around the neck area, indicated by a visible band. Open the glass ampoule by following the instructions below:

L010444(02)

2018-05

- Hold the ampoule upright to allow the contents to settle into the bottom portion of the ampoule, emptying the head space. Tap the bottom of the ampoule gently on a flat surface, if required.
- Protect your hands from broken glass by loosely wrapping the upper portion of the ampoule in a paper towel, light cloth or piece of gauze. If the ampoule does not break cleanly, this barrier can prevent cuts and helps contain the glass shards.
- With one hand holding the bottom, use the other hand, with the barrier, to grasp the top portion of the ampoule just above the score, between the thumb and index finger.
- 4. While holding the bottom firmly, push the top section away from you with easy, even pressure. A light pressure applied correctly will cleanly snap the ampoule open, while using too much force can cause it to shatter.
- Unwrap the opened ampoule and discard the top. The product is now ready to be removed from the ampoule.
- NOTE: The open ampoule may have sharp edges along the top where it separated. Do not touch this area.
