Learn why
BD Ultra-Fine™ Nano™
4mm Pen Needles
are a modern option
for your diabetes therapy.

Why BD Nano™ 4mm Pen Needles?

Insulin is meant to be injected into the fat layer just below the skin for consistent absorption.¹

If you inject into a muscle, the insulin can work too quickly, which may lead to low blood sugar.²

The BD Nano™ 4mm Pen Needle, **BD's shortest pen needle** gets insulin to the fat layer over 99.5% of the time, at all injection sites.³

Only BD Nano™ 4mm Pen Needles combine two technologies for an optimized injection experience.

NOW with
EasyFlow™
Technology

Injectons made easier.

BD Nano™ 4mm Pen Needles now have EasyFlow™ Technology to **improve insulin flow through the needle. This makes injections more convenient**, including for people with hand-strength challenges.^{4,†}

The Arthritis Foundation Awarded their Ease-of-Use Commendation⁶

Larger inner diameter allows medication to flow easier through the needle.

Still features

Penta  point
Comfort

BD Nano™ 4mm Pen Needles are the **first and only** pen needles with patented 5-bevel technology.

The flatter, thinner needle tip eases into the skin **with less force**, clinically demonstrated to **make injections more comfortable**.⁵

A difference you can feel.

[†] BD Nano™ 4mm Pen Needle, on average, compared with other pen needles of its class when tested on leading insulin pen brands.
