BD Insyte™ Autoguard™ BC
Shielded IV Catheter with Blood Control Technology
Clean, easy and efficient for clinicians and patients

You strive for a clean IV placement every time, but when you have to apply pressure while activating the device’s safety mechanism and connecting the extension, blood spills can happen.

**The BD Insyte™ Autoguard™ BC shielded IV catheter with blood control technology addresses these challenges:**

- No venous compression required during insertion
- Less mess and minimized healthcare worker risk resulting from blood leakage
- Needlestick injury protection
- Less blood leakage means less disruption during the patient’s care

**Built-in blood leakage prevention**

No need to worry about stopping blood during insertion with BD Insyte Autoguard BC catheters.

**Stop blood leakage** without the need for venous compression—the unique design allows a one-handed insertion technique with blood flow resuming when an add-on device is connected.

**Clinically demonstrated to reduce the risk of blood exposure by 95%**—reducing staff exposure to blood as well as surface contamination.

In a clinical study, 98% of clinicians stated they felt no risk of blood exposure during insertion when using BD Insyte Autoguard BC catheters.¹

BD blood control technology minimizes blood exposure, cleanup time and use of supplies associated with blood spills.²

¹Compared to a non-blood control IV catheter

Safety at the push of a button

The BD Insyte Autoguard BC catheter is tailored for the clinician’s safety and insertion success, leaving you feeling confident in each insertion, and your patients feeling confident in you.

Demonstrated to reduce needlestick injuries by 95%3*

- Push-button needle shielding technology
- Fully encapsulated needle

*Compared to a nonsafety IV catheter.

The right IV catheters, right from the start

**BD Vialon™ Biomaterial**

The catheter material is designed to resist kinking and softens up to 70% in the vein, enabling longer dwell times and reducing the chance of mechanical phlebitis by up to 50%.

*Compared to an FEP catheter.

**BD Instaflash™ Needle Technology**

Incorporates a notched needle (20- to 24-gauge) which may improve first-stick success and reduce painful hit-and-miss insertions.

**Blood control technology provides protection from blood exposure**

*Compared to a nondiabetes control IV catheter.

**Complete needle encapsulation**

**Push-button needle shielding**

**BD Vialon™ Biomaterial**
