## Key Terms

Term	Label Icon	Description
<b>10 Drop</b>		Spike is designed so that 10 drops equal approximately 1 mL.
<b>15 Drop</b>		Spike is designed so that 15 drops equal approximately 1 mL.
<b>20 Drop</b>		Spike is designed so that 20 drops equal approximately 1 mL.
<b>60 Drop</b>		Spike is designed so that 60 drops equal approximately 1 mL.
<b>Bag Access</b>		SmartSite port integrated into the drip chamber spike which allows direct fluid path access into a spiked container.
<b>Non-Vented</b>		Characteristic of the spike that enters the solution container. Designed for collapsible plastic containers as no air is required to enter the container in order for fluid to flow.
<b>Vented/Non-Vented</b>		Characteristic of the spike that enters the solution container. Designed for containers that do not collapse when emptying (glass or semi-rigid plastic). Vent allows air to enter the container in order to allow fluid to flow. *Note: All sets with drip chambers are vented/non-vented unless otherwise noted.

Disclaimer: These substitutes are recommendations only, if you have any clinical questions or choose to use another SKU listed in the COVID-19 Catalog, please discuss with your local Account Executive.

## Key Terms

Term	Label Icon	Description
<b>Syringe Adapter</b>		Specialty sets that allow delivery from a syringe with the Alaris large volume pump module or as a secondary infusion.
<b>180 Micron Filter</b>		Designed for blood and blood products to remove debris such as clots.
<b>200 Micron Filter</b>		Designed for blood and blood products to remove debris such as clots.
<b>Check Valve</b>		A device which allows flow in only one direction. Commonly used for secondary piggyback drug administration or to protect certain elements of the set from high pressures seen when a syringe injects into the set. Reduces risk of contaminants flowing towards solution bag.
<b>DEHP</b>		(Diethyl hexyl Phthalate) A plasticizer used in PVC tubing to make soft and pliable. <i>*Note: All sets contain DEHP unless otherwise noted.</i>
<b>Low Sorbing (PE Lined)</b>		These sets are Polyethylene-lined and PVC is not part of the material formulation in the tubing fluid path. Low Sorbing sets are designed to minimize absorption of drugs into the matrix of tubing materials and prevent leaching (has inert internal surface).

Disclaimer: These substitutes are recommendations only, if you have any clinical questions or choose to use another SKU listed in the COVID-19 Catalog, please discuss with your local Account Executive.

## Key Terms

Term	Label Icon	Description
<b>Low Sorbing and DEHP</b>		Some sets may be labeled as low sorbing and contain DEHP. These sets have some portion(s) of tubing that contain PVC with DEHP in the fluid path.
<b>Amber Tubing</b>		PVC Tubing with an outer layer amber in color and no colorant in the inner layer.
<b>Yellow Striped Tubing</b>		Tubing with a yellow striped indicator.
<b>BPA</b>		(Bisphenol A) Used in the production of polycarbonate plastics and epoxy resins.
<b>Not Made with BPA</b>		Set/Component is not made with BPA.
<b>Pressure Sensing Disc</b>		A unique pressure sensing disc on dedicated administration sets provides advanced pressure monitoring capabilities including a numeric pressure reading in real-time, reduces startup delays due to mechanical slack, shortens the time to alarm for an occlusion and helps prevent inadvertent bolus delivery during occlusion release.
<b>Split Septum</b>		An injection site that can be accessed with a blunt cannula or needle for IV administration
<b>Anti-Siphon Valve</b>		Prevents syphoning or free-flow emptying of a syringe or other container.
<b>Standardbore</b>		Tubing with larger diameter $\geq 0.1$ " *Note: All sets with tubing are standardbore unless otherwise noted.
<b>Smallbore / Minibore</b>		Tubing with smaller internal diameter $> 0.04$ " and $< 0.1$ " to minimize the contained priming volume.

Disclaimer: These substitutes are recommendations only, if you have any clinical questions or choose to use another SKU listed in the COVID-19 Catalog, please discuss with your local Account Executive.

## Key Terms

Term	Label Icon	Description
<b>Microbore / Ultra-Minibore</b>		Tubing with smaller internal diameter $\leq 0.04''$ to minimize the contained volume.
<b>0.2 Micron Filter</b>		Removes particulate matter larger than 0.2 microns and virtually all fungi and bacteria. Often used as a final filter for air elimination. <i>Notes:</i> - BD filters are self-priming. DO NOT INVERT FILTER. - BD 0.2 micron filters contain Supor (Polyethersulfone) membranes which have low protein and drug binding characteristics.
<b>1.2 Micron Filter</b>		Removes particulate matter larger than 1.2 microns, air elimination. <i>Notes:</i> - BD filters are self-priming. DO NOT INVERT FILTER. - BD 1.2 micron filters contain Supor (Polyethersulfone) membranes which have low protein and drug binding characteristics.
<b>15 Micron Filter</b>		Removes particulate matter larger than 15 micron from solution.
<b>Needle-free/Needleless</b>		Needle-free connectors or valves, also known as needleless connectors or valves. They offer a safe way to access IV lines without the use of a needle, which greatly reduces the risk of accidental needlestick injuries.
<b>Fixed Male Luer Lock</b>		Male luer and collar are one piece. Collar does not spin or move freely.
<b>2-piece Male Luer Lock</b>		Male luer lock with retractable rotating collar.
<b>Spin Male Luer Lock</b>		Male luer lock with rotating collar.

BD-16498
