

BD Product Name: BD Pyxis™ Med Link

Date of Critical or Security Patches: September 2018

Abstract: Zebra MC75A KRACK Vulnerability Patch

Microsoft® & Third-Party Patches

BD has identified patches from Microsoft and Zebra Mobile Devices that have been identified as critical or security related for May 2019. These patches were not found to adversely affect BD products and will be applied according to customers’ service agreement.

Customers that maintain patches independent of BD automated delivery should ensure the validated patches are installed on their BD systems as the acting responsible entity in order to maintain the correct security posture of the system(s).

Patch Name	Patch Description	Patch ID
KARCK Vulnerability for Zebra MC75A Handhelds	KRACK (Key Reinstallation Attacks) is a security vulnerability that targets a key step in the Wi-Fi authentication protocol to break security encryption. These vulnerabilities could enable a proximate attacker (within Wi-Fi range of both the client device and the access point) to access and tamper with Wi-Fi packets over connections that are protected by WPA/WPA2 encryption.
