Questions about the PleurX™ Catheter System or PeritX™ Catheter System?

Call our patient navigators at **833.549.7677**.

PleurX™ Pleural Catheter System

Indications for Use: The PleurX™ Pleural Catheter System is indicated for intermittent, long term drainage of symptomatic, recurrent, pleural effusion, including malignant pleural effusion and other recurrent effusions that do not respond to medical management of the underlying disease. The devices are indicated for the palliation of dyspnea due to pleural effusion and providing pleurodesis (resolution of the pleural effusion). The PleurX™ Pleural Catheter is indicated for adults only.

The Lockable Drainage Line is used to drain fluid using standard wall suction, water seal drainage system, vacuum bottle, or other appropriate method.

Warnings: Do not put anything except the access tip of the Lockable Drainage Line, Catheter Access Kit, or PleurX™ Vacuum Bottles into the catheter valve since any other device could damage the valve. A damaged valve may allow air into the body or let fluid leak out through the valve when not draining.

Do not place the PleurX™ Pleural Catheter into the peritoneal space as it could lead to misidentification of the catheter and/or mistreatment of the patient.

PeritX™ Peritoneal Catheter System

Indications for Use: The PeritX™ Peritoneal Catheter System is indicated for intermittent, long term drainage of symptomatic, recurrent, malignant and non-malignant ascites that does not respond to medical management of the underlying disease and for the palliation of symptoms related to recurrent ascites. The use of the PeritX™ Peritoneal Catheter for non-malignant ascites is limited to patients who are intolerant or resistant to maximum medical therapy, refractory to large volume paracentesis (LVP)

and are not candidates for a trans-jugular intrahepatic portosystemic shunt or LVP. The PeritX™ Peritoneal Catheter is indicated for adults only.

The Lockable Drainage Line is used to drain fluid using standard wall suction, water seal drainage system, vacuum bottle, or other appropriate method.

Warnings: Do not put anything except the access tip of the Lockable Drainage Line, Catheter Access Kit, or PleurX™ Vacuum Bottles into the catheter valve since any other device could damage the valve. A damaged valve may allow air into the body or let fluid leak out through the valve when not draining.

A diagnostic paracentesis should be performed if the patient shows signs or symptoms of possible spontaneous bacterial peritonitis (SBP) such as fever or abdominal pain. If SBP is present, the patient should be treated per institutional guidelines, including systemic antibiotics and repeat diagnostic paracentesis at the end of the antibiotic regimen. For a patient with resolved SBP, the patient should be treated per institutional guidelines, including prophylactic antibiotics to help in the prevention of refractory or recurrent SBP. In the case of refractory or recurrent infections, the catheter should be removed and reinserted at the discretion of the clinician after the SBP has resolved.

Do not place the PeritX™ Peritoneal Catheter into the pleural space as it could lead to misidentification of the catheter and/or mistreatment of the patient.

Please consult product labels and package inserts for indications, contraindications, hazards, warnings, cautions, and information for use.

Add an entry

Add a drainage entry by tapping the floating **+** button.

The date and the time are prepopulated. Edit them by tapping **Date** or **Time**.

Add the drainage volume by tapping **Volume**.

A pain rating and notes are not mandatory, but additional information can help you and your physician with your drainage data.

Save an entry by tapping the **SAVE** button.

View logs

View drainage details by tapping the entry on the bar graph.

Toggle between the **Drainage Volume** graph and **Pain Rating** graph.

View drainage data by swiping left and right.

View drainage data in detail by scrolling up or down.

Edit the entry by tapping it.

Instructions

Tap **INSTRUCTIONS** and select your bottle type.

Bottle with opener

Bottle without opener

View step-by-step instructions on drainage by tapping on **Step-by-Step**. You may use the **Next** and **Back** voice commands to navigate between pages.

View drainage procedure instructional videos by tapping on **Watch Instructional Video**.

Set drainage schedule

Open the menu and tap **View Calendar**.

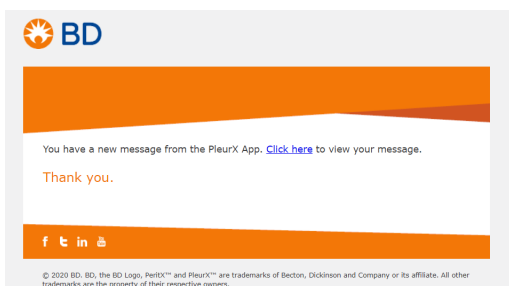

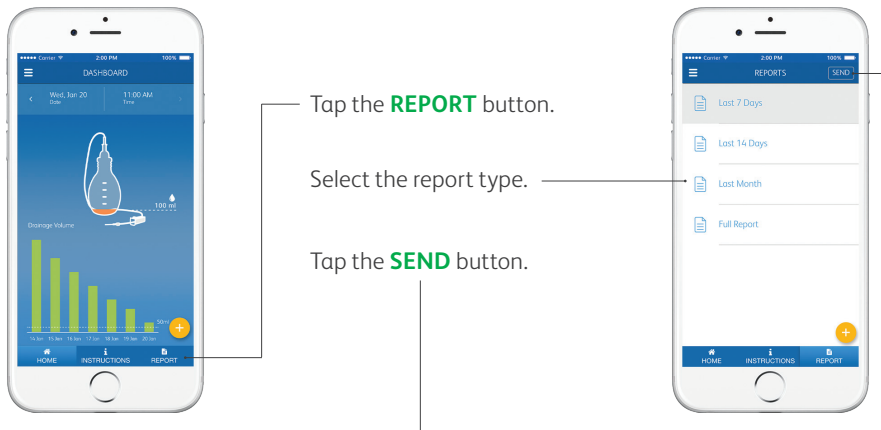

Tap **Drainage Schedule**.

Set a drainage schedule.

Tap the **SAVE** button when you are finished.

Send a report

You will receive an email from **donotreply@bd.com** with your drainage report. Download the report from the email.

BD PleurX™ catheter - Patient drainage report

Notes for physician

Drainage details

Date	PleurX volume drained (mL)	Pain rating	Where was the drainage procedure performed?	Who performed the drainage procedure?	How long did the drainage procedure last?
12/28/20	1000	10			
12/29/20	800	8			
12/30/20	600	8			
12/31/20	400	6			
12/31/20	200	4			
12/31/20	100	4			
12/31/20	100	2			

All data users generate this report are obtained by the user through the PleurX™ App. This data is for informational purposes only and is not intended to be a substitute for professional medical advice, diagnosis, or treatment.

You may print the drainage report and bring it to your next appointment.
