

Joan Patient

See the positive impact the
blood collection device has
on patient experience.¹

At age 82, Joan still ran a 100-year-old family-owned pharmacy in a small Connecticut town. Like many people, blood draws during hospital stays have always caused added anxiety² for Joan. As a hospital patient she dreaded the constant poking and the resulting pain and bruising of her arms.

1 in 3

adults have difficult
intravenous access and
may need multiple stick
attempts.³

During a recent stay, while
bracing for a “painful pinch,”
she was surprised when a nurse
informed her that a blood sample
had already been collected.

*“The best part was
not having to be stuck
anymore when they
needed to collect
my blood.”*

As a practicing pharmacist for 40 years, Joan has seen many significant advances in medicine. For her, the PIVO™ Needle-free Blood Collection Device is a breakthrough innovation.

*“It will transform how we experience
blood collection in the hospital.”*

may advance your practice at bd.com/PIVO

The BD Peripheral Line Draw Solution

Trust in the PIVO™ Needle-free Blood Collection Device and the ExT™ Stabilized Extension Set with NearPort™ IV Access, the practice-advancing, needle-free blood draw solution. Elevate the standard of care while instilling confidence and enhancing experience for both your patients and clinicians.¹

Reliable

Reduce the risk of preanalytical lab errors and sample re-collects.⁴ Improve confidence in diagnostic accuracy, helping your patients receive the right treatment at the right time.⁴

Safer

Helps protect patients by reducing risks of IV replacements and is an alternative to central line draws while aiding in vessel health preservation.^{4,5,6}

Comfort

Help alleviate the fear associated with repetitive needlesticks.² Draw blood while minimizing disruption to your patients' rest and healing processes.^{2,7}

When compared to venipuncture, patients who received daily phlebotomy preferred the PIVO™ Needle-free Blood Collection Device experience:²
