

Safely manage controlled substances

Pyxis C^{Safe}® system

Not monitoring controlled substances jeopardizes patient safety. For this reason, The Joint Commission, the Drug Enforcement Administration (DEA) and other regulatory agencies are placing greater importance on the need to account for all controlled substances at all times. An uncontrolled environment with reporting errors and drug diversion can lead to fines and revoked licenses. The Pyxis C^{Safe} system provides an efficient method for storing, tracking and replenishing supplies of controlled substances.

The system streamlines documentation from the pharmacy to the nursing floor, virtually eliminating time-consuming and error-prone manual recordkeeping, and making it easy to quickly spot discrepancies or signs of diversion. The system resides in the pharmacy and functions as a closed-loop tracking system from the point that controlled substances are received from the wholesaler until they are removed for patient administration.

Key advantages

- Integrates with the Pyxis MedStation® ES system and Pyxis® Anesthesia ES system
- Controls system user access by permissions and rights
- Facilitates compliance with strict regulatory body audit requirements
- Authenticates user identity against the hospital's active directory user-managed infrastructure
- Maintains accurate and readily retrievable real-time data for audits
- Automates controlled substance replenishment for the the Pyxis MedStation ES system
- Facilitates replenishment of the Pyxis MedStation ES system and Pyxis Anesthesia ES system
- Enhances security and accountability through logging and auditing improvements
- Reports controlled substance movement to support regulatory demands

Pyxis®

Pyxis C¹Safe system

Pyxis C¹Safe system helps minimize reporting errors and tracks controlled substances.

Efficient and accurate inventory control

- Provides seamless hospital-wide management of controlled substances
- Connects with the Pyxis MedStation ES system, Pyxis Anesthesia ES system and the Pyxis Enterprise Server through the CareFusion SmartWorks platform
- Streamlines documentation from pharmacy to nursing
- Helps eliminate manual recordkeeping
- Identifies discrepancies and user compliance opportunities

Real-time reporting and audit assistance

- Reduces the time and expense of meeting audit standards
- Provides a simpler, more accurate way to prepare for audits
- Improves critical data and documentation accessibility

The Pyxis C¹Safe system integrates with the Pyxis MedStation ES system and Pyxis Anesthesia ES system
