

BD Pyxis™ CUBIE™ Pockets—

Performance you can trust

Security, flexibility and accessibility

BD Pyxis™ CUBIE™ pocket technology features an innovative lid design to enhance medication security, support diversion detection and enable quicker, more reliable access for nursing. CUBIE pockets allow for single line item access based on user privileges. With less time needed for managing and searching for medications, nurses can devote more time to patient care.

CUBIE pockets are available in a variety of sizes so the pharmacy can easily adjust pockets to accommodate an ever-changing formulary and can dynamically manage inventory. This solution helps track usage and reduce risk of medication errors, missed doses, costly lost inventory and time-consuming, non-value activities.

CUBIE pockets help healthcare facilities:

- Increase medication availability.
- Enhance the security of high-risk, high-alert medications.
- Reduce risk of medication errors.¹⁻⁷
- Maximize drawer configurability and capacity for the storage of small to large medications.
- Reduce inventory shrinkage and lost charge capture.
- Limit diversion opportunities.⁸

Multiple pocket sizes to meet your needs

CUBIE pockets are available in both a half-height and full-height configuration that provides capacity and flexibility.

Modular and configurable design helps the pharmacy better accommodate frequent inventory changes due to formulary adjustments—further helping ensure quick availability.

CUBIE pockets promote efficiency to improve workflow and reduce costs

- Increase medication availability and predictability, reducing time to first dose⁹
- Accommodate ever-changing inventory due to drug shortages, formulary adjustments or packaging changes by enabling pocket reconfiguration or exchanges¹⁰
- Reduce loss of revenue due to inventory shrinkage
- Increase security and capacity with more line items and doses using BD Pyxis™ full-height CUBIE™ pockets vs. other drawer types
- Enable storage for larger medications—such as prefilled syringes, vials and IV bags—using full-height CUBIE pockets

Take greater control of the medication distribution process with secure medication transport using the BD Pyxis™ CUBIE™ System

- Optimally secure high-risk medications from pharmacy to patient care areas, helping reduce diversion risk and errors
- Allows filled CUBIE pockets to securely be moved to, from and in between devices
- Promotes efficient check process by Pharmacist prior to delivery
- Improves load process efficiency by allowing CUBIE pockets to be inserted directly into drawers via the CUBIE map
