BD Integra™ Syringe
with retracting BD PrecisionGlide™ Needle

Important usage guidelines

1. Attachment
Attach the BD Integra needle onto the BD Integra syringe with a push and a clockwise twist. If pre-attached, tighten the needle onto the syringe prior to use. Pull the shield straight off the needle.

2. Aspiration
Draw up medication in accordance with your institution’s protocol.

3. Injection
Administer medication in accordance with your institution’s protocol.

4. Activation
Push plunger rod to activate the safety mechanism. Depress until you sense two “clicks.”
Activation can occur before or after needle is withdrawn from the patient.

5. Needle retraction
The needle will disappear into the syringe and the plunger will be recessed into the barrel when activation is complete. Discard immediately into an approved sharps collector after single use.

Remember
- If activation is performed before needle is withdrawn from patient, do not advance needle while depressing plunger rod.
- If activation is performed after needle is withdrawn from patient, minimal splatter may occur. When activating the device outside of the patient, hold the device downward at arm’s length and activate while pointing away from self and others. Keep device within sight at all times to avoid accidental needlestick injury.
- Do not use this product to draw blood or for venipuncture.
- BD Integra™ needle and syringe do not have a standard luer connection. Conventional luer lock needles cannot be used with the BD Integra™ syringe.
- When delivering highly viscous medications, use a 22G or 21G BD Integra™ retracting needle, and inject at a controlled rate.
- Follow your institution’s protocol for aseptic technique and skin preparation.
- Follow your institution’s policy for safe disposal of all medical waste.
