

CareFusion Knowledge Portal

Data Insight for Pyxis® technologies

Maximized flexibility for data management

Building upon a single platform, Data Insight is an extension of the Knowledge Portal to help address key customer needs—specifically custom query creation and data flexibility. Data Insight takes data flexibility one step further by providing access to unfiltered information generated from Pyxis® technologies. By enabling hospital informatics and designated specialists to run ad-hoc queries of available Pyxis data, your facility or health system can be more prepared to respond to requests beyond pre-defined reports of Key Performance Indicators (KPIs).

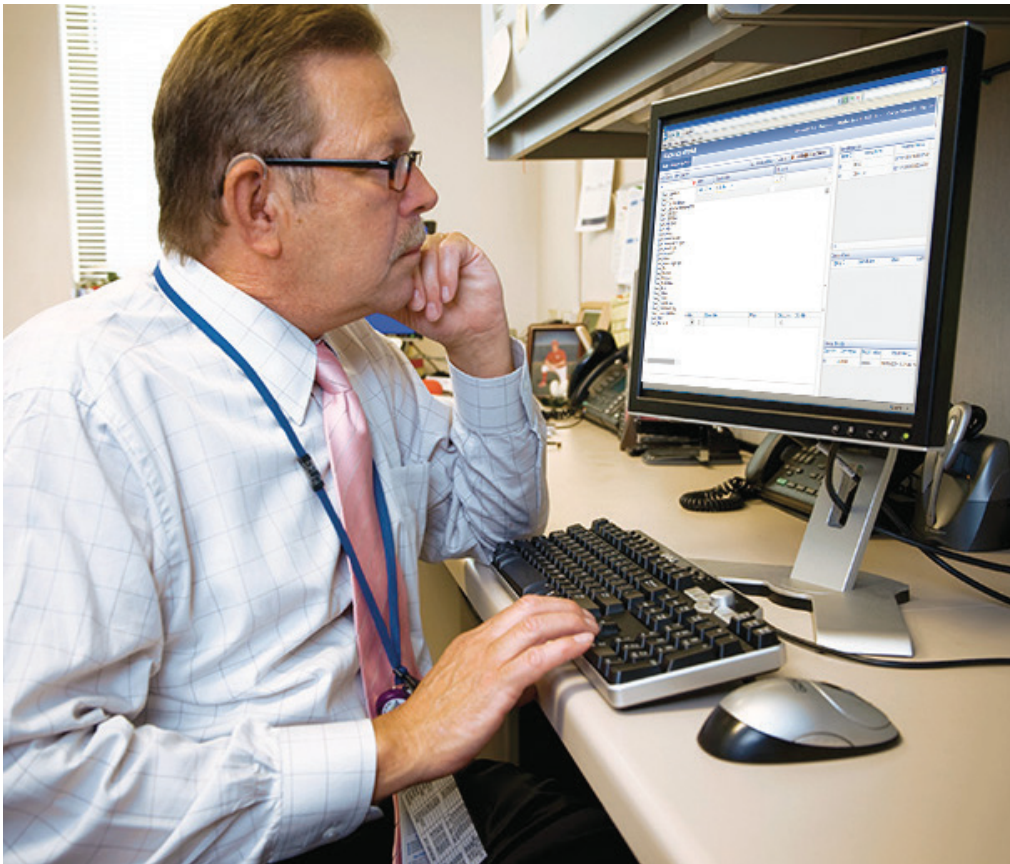

- Generate and distribute custom queries for the single hospital or across the health system through user management and email notifications
- Secure delivery of custom query results to identified users, as needed
- Facilitate compliance with select Joint Commission Accreditation Standards and hospital policies
- Monitor compliance on dispensing medications without patient order (*order overrides*)
- Track carrying costs and help prevent stock-outs by optimizing medication and supply management

Unfiltered data generated from Pyxis technologies can be imported into a variety of user data files to allow maximized flexibility to manage and manipulate information as needed.
