

Item Master Preparation and Maintenance

Pyxis® Perioperative Solutions

Item Master Preparation and Item Master Maintenance services help ensure validity of data sets including, but not limited to:

- Packaging taken down to low unit of measure
- Populated and accurate manufacturer parent and child names
- Consistent and accurate distributor name
- Populated United Nations Standard Products and Services Codes (UNSPSC)

The core to successful supply management, from the OR to the nursing floors, is combining your Pyxis® supply technologies investment with accurate item master data. Whether you're a stand-alone facility or a multi-facility IDN, your item master needs to contain the essential information to confirm that the right items are being purchased from the right vendor and in the right quantities. Our Item Master Preparation service verifies and establishes data integrity, standardization and categorization so that you can experience optimal performance from day one of installing your Pyxis® supply technologies.

Pyxis® Perioperative Solutions

Up to 70 percent of lines in an average file may need a correction or enrichment. Lack of data preparation to correct these discrepancies can cause data conflicts within Pyxis® supply technologies, resulting in patient billing errors and inaccurate supply inventory and usage reporting.

Clean data for optimal system performance

With consistent and accurate data from the start of the installation process, processing errors and manual entry efforts are reduced resulting in:

- Alignment of Pyxis® supply technologies specs with data specs
- Ease of Pyxis® supply technologies integration with existing materials management information systems and data files
- Facilitated Pyxis® supply technologies deployment time
- Accurate supply inventory and reporting
- Proper patient billing

Item Master Services

Our first step to preparing your item master, prior the installation of your Pyxis® supply technologies, is to check the accuracy and completeness of each line of your data. Next, we include UNSPSC commodity coding, increasing your reporting potential.

To maintain continued quality as items turn over during normal shifts in utilization, our Item Master Maintenance service includes the same steps as the preparation process and is recommended on a quarterly basis.

Sample pre and post data preparation
