

BD™ Convenience Pack

Supporting Clinical Pharmacist increasing efficiency in medication compounding

BD™ Convenience Pack

For the hospital pharmacists who would like to increase their efficiency in medication preparation.

BD™ Convenience pack

- Double bagging to ensure less risk of contamination
- Tray cover does not produce visible fibers
- BD syringes in the tray are sterile
- Rigid tray - syringes stay together (opposite to bags)
- Same BD syringes to those used in wards
- Sterile, single use
- No DEHP and PVC intentionally added
- Sterilization: ethylene oxide

Recent guidelines* emphasise greater responsibility to the pharmacist than ever before.

- Hazardous medicines should be prepared under appropriate conditions using technology such as Phaseal to protect you from exposure to these hazardous drugs.
- Pharmacists must ensure an appropriate quality system for compounded medicines.
- Limited pharmacy personnel may not support the challenges of evolving pharmacy practices.

In this changing environment technically competent pharmacists continually strive to improve their working practices. BD™ convenience packs can support efficiency.

BD™ Convenience pack offers a tray containing multiple sterile, luer lock BD syringes, wrapped in a pouch that maintain tray surface sterile.

The rigid tray keep syringes together and no visible fiber are produced while opening it.

By removing the need to disinfect and open many single packaged syringe blisters, BD™ Convenience Pack helps facilitating the working process.
