ACE® Brand Antimicrobial Elastic Bandages

ACE® Brand Elastic & Athletic Bandages and Sports Tape are used to support an injured part of the body, to reduce strain on muscles, tendons and joints and to suppress or reduce swelling by providing localized compression. ACE® Brand Sports Tape provides firm support, and helps protect weak and/or injured joints, and is ideal for strenuous activity. ACE® Brand Elastic & Athletic Bandages and Sports Tape help prevent injuries and sprains.*

ACE® E-Z Clips

Antimicrobial Elastic Bandages

- Antimicrobial treatment inhibits growth of bacteria on the bandage
- Special ACE® Brand E-Z Clip enables bandage to be easily secured
- Bandage retains elasticity after repeated use and washings
- Provides firm support and compression for strains and sprains

R.I.C.E. Therapy

The most common forms of sports injuries are sprains and strains of muscles and tendons. A basic treatment for these types of injuries is called "R.I.C.E. therapy":

Rest – Stop the activity immediately. Continued stress can increase the damage done to the tissue.

Ice – Apply an ACE® Brand Cold Compress. Cold reduces the size of the blood vessels, thereby decreasing bleeding, reducing swelling, and easing pain.

Compression – Apply compression with an ACE® Brand Bandage. Compression helps to reduce swelling.

Elevation – Elevate the injured limb above the level of the heart to help drain excess fluid from the area.

Stretching and Exercising

The following guide illustrates some, but not all of the stretching exercises that can minimize the risk of injury. These stretches should be incorporated into your warm-up and cool-down periods.

When stretching, you should feel slight, but comfortable, tension. As you hold the stretch for approximately 10-30 seconds, you should feel the tension gradually diminish. If the tension does not decrease, reduce the pressure you are placing on your muscles, until you are comfortable.

Basic stretching guidelines:

- Do not "bounce" while stretching. Keep constant tension on the muscle groups.
- Practice slow and controlled stretches.
- Do not hold your breath while stretching. Breathe deeply and slowly.
- Stretching should not be painful — stretch within your own limitations

GROIN STRETCH – Sitting with the soles of your feet placed together, slowly lean forward and hold for 25 – 30 seconds. Repeat.

LEG STRETCH – Placing one leg in front of you and leaning forward until your knee is directly over your ankle, slowly lean forward and hold. Repeat using your opposite leg.

HAMSTRING STRETCH – Sitting with one leg extended straight in front of you and the other tucked along the extended leg, slowly lean forward and hold. You may not be able to touch your toes, but lean as far as you can while remaining comfortable. Repeat with the opposite leg.

ARM STRETCH – Standing with your arms extended upward (your palms facing outward and your fingers interlaced), slowly push your arms up and out. Hold for 20 seconds and repeat.

CALF STRETCH – Leaning against a wall or some other solid support, place one leg in front of your other straightened leg, keeping your toe pointed straight forward. Be sure to keep the heel of your straightened leg flat and hold. Repeat using your opposite leg.

SIDE STRETCH -

Standing with your arms over your head, place the elbow of your left arm in your right hand and slowly bend to your right side. Hold for 20 seconds and then alternate by placing the elbow of your right arm in your left hand and stretch your other side.

TekZone® Antimicrobial Braces & Supports

- **Reduces Bacteria Growth • Reduces Odor**
- **Relieves Joint Pain • Easy to put on and take off**

ACE® Brand TekZone® braces have an antimicrobial treatment that inhibits bacteria growth on the braces and reduces odor caused by bacteria. The braces are designed to offer a proper fit with minimal slipping and bunching. Gel cushions are strategically placed at the joint to conform to the shape of the joint providing support and comfort. The braces retain heat, which aids in circulation and helps keep your muscles pliable, thus reducing susceptibility to injury.

ACE® Brand TekZone® inhibits bacteria growth on the braces through a mechanical process that allows for the antimicrobial treatment to be molecularly bound to the inner and outer lining of the braces, as well as the neoprene blend material. The treatment reduces odor caused by bacteria.

Gel cushions are strategically placed inside the braces. The cushions conform to the shape of the joint providing support and comfort. The brace material retains heat, which aids in circulation and helps keep muscles pliable while reducing susceptibility to injury.

ACE® TEKZONE PRODUCTS FOR INJURIES

PRODUCT	SYMPTOMS	CAT. #	SIZES

ACE® Brand Hot & Cold Therapy

ACE® Brand Hot & Cold Therapy products provide safe, effective hot or cold treatment.*

Hot Therapy Heat aids recuperation from injuries and should be used only after swelling has subsided. Hot Therapy is recommended for:

- Muscle aches
- Stiffness
- Tension
- Cramps
- Arthritis

Cold Therapy is frequently recommended by doctors to help reduce swelling and relieve pain without the drippy mess of ice cubes. Ideal for:

- Sprains
- Bumps and Bruises
- Simple Headaches
- Strains
- Toothaches
- Insect Bites

207510, 207513

Instant Cold Compress

- Refrigeration not required
- Emergency first aid treatment
- Single use, disposable
- Convenient— can be used immediately, anywhere

Instant Cold Compress

Twin Pack

207514

- Refrigeration not required
- Emergency first aid treatment
- Single use, disposable
- Convenient; can be used immediately, anywhere
- Great for home, in the car or on the playing field

207516

Reusable Cold Compress

- Exclusive Soft Touch fabric contours to the body
- Reusable – Cold application without the drippy mess of ice cubes
- Patented

Reusable Cold Compress

Large

207517

- Exclusive Soft-Touch fabric
- Helps relieve pain and swelling
- Comfortable, contours to body
- Patented

LG 3 8290 207517 2

207518

Hot & Cold Compress

Reusable

- Soft outer ACE® bandage pouch for added comfort
- Insulated side to help retain heat or cold
- Reusable and microwavable

3 8290 207518 9

Hot & Cold Compression Wrap

Reusable

207519

- Deluxe compression wrap – ACE® wrap bandage and compress in one
- Wrap conveniently holds compress in place
- Reusable and microwavable
- Compression helps reduce swelling

208603

Hot & Cold Combo Pack

- ACE® Brand bandage wrap conveniently holds gel-pack in place
- Reusable cold pack helps relieve pain and reduces swelling
- Microwavable hot pack promotes healing and is ideal for arthritis and muscle aches

Ice/Heat Back Wrap

203960

- Includes reusable, safe, non-toxic hot or cold gel pack
- Insulating wrap material is ideal for hot or cold treatments
- Adjustable wrap conveniently holds gel pack in place
- Neoprene blend wrap combined with hot or cold gel pack provides a constant and long lasting temperature during treatment
- Reusable gel pack is microwaveable for heat therapy and can be placed in freezer for cold therapy

203961

I.C.E./Heat™ Multi-Purpose Wrap

- Includes reusable, safe, non-toxic hot or cold gel pack
- Insulating wrap material is ideal for hot or cold treatments
- Multi-purpose wrap conveniently holds gel pack in place
- Neoprene blend wrap combined with hot or cold gel pack provides a constant and long lasting temperature during treatment
- Adjustable wrap allows for use on multiple body parts
- Reusable gel pack is microwaveable for heat therapy and can be placed in freezer for cold therapy

Arthritis: Inflammation of a joint. Swelling, redness, and/or heat that may be caused by tissue injury or disease in the joint.

Chondromalacia Patella: Softening and deterioration of the articular cartilage on the underside of patella. Tenderness around patella with or without swelling; dull ache in the center of knee.

Contusion: Bruise, pain and/or discoloration.

General Soreness: Pain as a result of overuse or chronic injury. Diffuse pain around the affected area.

Ligament Sprain/Instability: Ligament is stretched or torn decreasing the strength of the joint. Pain over ligament, joint, stiffness and decrease in range of motion.

Patella Femoral Pain Syndrome: Injuries resulting in tracking problems of the patella. Pain around kneecap resulting from activity such as running, stairs, or excessive knee movement; overuse injury.

Patella Tendonitis (Jumper's Knee): Inflammation of the tendon connecting the patella to the tibia (lower leg). Pain concentrated over patella tendon; increases with athletic activities; overuse injury.

Quadriceps Tendonitis: Inflammation of the tendon connecting the quadriceps to the patella. Pain concentrated over quadriceps tendon, increases with athletic activities; overuse injury.

Swelling: Collection of fluid in or around joint or inflammation of the bursa sack in joint. Palpable fluid around joint that can be painful.

General Soreness: Pain as a result of overuse or chronic injury. Diffuse pain around the affected area.

Ligament Sprain/Instability: Ligament is stretched or torn decreasing the strength of the joint. Pain over ligament, joint, stiffness and decrease in range of motion.

Carpal Tunnel (CTS): Signs of CTS include swollen hands and wrists and can involve painful throbbing, tingling and numbness in your hand, wrist and forearm. These symptoms often occur when you are sleeping and cause you to wake up, but they can also happen during the day. CTS can affect all or any combination of your fingers and can cause your hand to become so weak that you cannot hold on to objects as firmly as you could before.

Swelling: Collection of fluid in and/or around joint. Palpable fluid around joint that can be painful.
